

Important Notice to MacOS Users.

Unsigned Library Notice: This addon incorporates a dynamic library that has not been signed through Apple's Developer Program. I understand that this might raise concerns; however, I assure you that the library is safe and has been thoroughly tested.

Open a Mac app from an unidentified developer

If you try to open an app that isn't registered with Apple by an identified developer, you get a warning dialogue. This doesn't necessarily mean that something's wrong with the app.

To override your security settings and open the app anyway, follow these steps:

1. In the Finder  on your Mac, locate the app you want to open. Don't use Launchpad to do this. Launchpad doesn't allow you to access the shortcut menu.
2. Control-click the app icon, then choose Open from the shortcut menu.
3. Click Open.
The app is saved as an exception to your security settings, and you can open it in the future by double-clicking it just as you can any registered app.

Note: You can also grant an exception for a blocked app by clicking the Open Anyway button in Privacy & Security settings. This button is available for about an hour after you try to open the app.

To change which apps can open on your Mac, choose Apple menu  >

System Settings, click Privacy & Security  in the sidebar, then go to Security on the right. (You may need to scroll down.)
